Sessions

20 OCT	U12 Training	5:00 PM – 6:30 PM	Riverside Ground – Zone B	Training
20 OCT	U10 Training	5:00 PM – 6:30 PM	Riverside Ground – Zone A	Training
21 OCT	U14 Training	5:00 PM – 6:30 PM	Main Pitch	Training
22 OCT	U12 Technical	5:00 PM – 6:30 PM	Riverside Ground	Training
24 OCT	Match vs Eagles	10:00 AM – 12:00 PM	City Ground	Match
25 OCT	U16 Match Prep	5:00 PM – 6:30 PM	Riverside Ground	Training

Training Session

U12 Training

Scheduled

Tue, 20 Oct 2026
5:00 PM – 6:30 PM (1h 30m)
Riverside Ground – Zone B

Plan | Players (16) | Attendance | Notes

Session Focus
Close control, dribbling and finishing after changing direction.

Drills (4)

Total Duration: 1h 30m

1		Dynamic Warm Up Movement, coordination and ball control.	15 min
2		Close Control Dribbling Change of direction with close control.	25 min
3		Finishing Practice 1v1 and 1v2 finishing scenarios.	30 min
4		Small Sided Game Apply skills in a game situation.	20 min

Coaching Points

- Keep the ball close when changing direction
- Use quick and controlled touches
- Look up before finishing
- Encourage decision making and confidence

SPORTOZEN ACADEMY

Training Screen: Approved UI Implementation Brief

Visual match first. Reuse the existing architecture. No redesign or new backend in this task.

Reference image: Page 1 of this PDF shows the exact approved 1536 x 1024 desktop Training mockup. All academy names, dates, amounts, portraits, and session counts shown are illustrative design data.

1. Codex task and source of truth

Work in **rajat827/sportozen-academy**. Inspect **AGENTS.md**, the current working tree, the latest relevant implementation, existing Training components, and any UI-lock instructions. Preserve uncommitted work. Create a new feature branch such as **codex/training-screen-locked-ui**; do not merge or deploy.

The screenshot on page 1 is the visual source of truth. Match its proportions, hierarchy, typography, card treatment, and navigation. Do not produce a new design, use a generic dashboard template, or place clickable hotspots over the screenshot. If the reference is unavailable in Codex, request it rather than inventing the layout.

2. Visual composition: match the screen

- **Sidebar (approximately 250 px):** deep navy; Sportozen plus academy identity; Home, Calendar, Players, Training, Messages, Reports, Fees, More. Training is highlighted green; AI Video Analysis is labelled *Coming soon*.
- **Header:** compact global search, notification and help icons, profile avatar. Avoid debug selectors and role/fixture controls in the product shell.
- **Main workspace:** title *Training*, one-line subtitle and green *+ Create Session* action, followed by a compact tab strip, date navigation, and batch/coach/venue filters.
- **Three-column body:** left session list with selectable rows; centre selected-session plan with summary and activity agenda; right squad roster, resources and session actions.
- **Cards and typography:** white surfaces, subtle borders, rounded corners, green primary actions, calm neutral labels, pastel statuses and readable row spacing.

3. Left column: Sessions

- Show dated, selectable session rows with batch name, start/end time, training ground/zone and labelled event type. Highlight the selected row with a pale-green treatment.
- Support multiple batches training at the same time, with separate coaches and independent resource zones. Same-time sessions remain separate records, not one merged session.
- Selecting a row updates the centre plan and right roster/resources using the same session ID. Never display one batch title with another batch roster.
- Use deterministic fictional fixtures in preview mode; in the authenticated app, use only authorised academy-scoped records.

4. Centre column: Selected session

- Top: type/status badges; session title, date, time/duration and venue. Use the selected session's saved time-zone context.
- Tabs: **Plan, Players, Attendance, Notes**. Each must show relevant content or a genuine empty state - not duplicated placeholder text.
- Plan tab: **Session Focus** card, ordered **Activities** with purpose, duration and optional thumbnail, total planned duration, and concise **Coaching Points**.
- Retain a drill/activity selector under Training if needed, but do not build a large standalone Drills Library in this task. Reuse current activity references and do not delete drill records.
- Keep a **batch plan by default**. Show player adjustments only when recorded. Do not force a coach to personalise all players or make a different plan for each player.

5. Right column: Batch, resources and actions

- Display selected batch title, coach and actual expected-player count; list an authorised subset of players with a *View All* action.

- Resources card: assigned coach, venue/zone and recorded equipment. If equipment is not recorded, use a neutral missing-information state.
- Session actions: strong **Start Session** button; secondary **Mark Attendance**; restrained **Reschedule** and **Cancel Session**.
- Preserve permission and session-state checks. Starting, rescheduling or cancelling must not silently send WhatsApp messages, write attendance, or alter reviewed evidence.

6. Expected interactions and states

- Date navigation and combined filters update the session list. Changing selection consistently updates centre and right content.
- Create Session opens the current authorised session builder. Do not introduce another backend endpoint or competing save logic.
- Mark Attendance opens the selected session's ledger; statuses remain Present, Absent, Excused and Unmarked. Unmarked never means absent.
- Notes and observations must link to the selected player, activity and session where appropriate. No observation means not reviewed.
- Respect actual role permissions. A coach must not gain admin or finance privileges to imitate the screenshot.
- Include loading, empty list, unsupported action, stale edit, failed save and conflict states in the same visual language.

7. Mobile design and fidelity gates

- At 390 and 320 px, use the existing mobile navigation. Lead with selected-session overview, then the agenda; keep sessions reachable via list/switcher and resources/actions in readable cards.
- At medium widths, collapse columns without shrinking essential text. Preserve visible selected-session identity. No horizontal page overflow or unreadable controls.
- Capture before/after screenshots at 1536 x 1024, 1440 px, 768 px, 390 px and 320 px.
- Provide a side-by-side reference versus actual browser screenshot. Visually inspect image proportions, card density, spacing, type hierarchy, tabs, actions and player counts. Document any deliberate changes needed for accurate data or permissions.
- Run lint, typecheck, unit, build and browser checks using the project's isolated QA setup. Do not reset customer data.

8. Explicit boundaries and deliverables

Keep the platform **football-only** and suitable for **multiple independent academies**. Reuse existing React components, design tokens, authentication, academy-scoped data access, records, report snapshots and parent conversations. **No new backend, migrations, provider integration, ratings, rankings, or AI analysis.** Activities are part of Sessions; parent weekly messages and monthly reports continue to use existing approved workflows.

Return: (1) exact Training route, branch/commit, (2) actual desktop/mobile screenshots, (3) reference comparison, (4) files changed, (5) working and blocked actions, (6) test results, and (7) remaining visual differences. Prepare a reviewable pull request named **Implement approved Sportozen Training screen**. **STOP for user visual approval; do not merge or deploy.**
